

PREMIUM LASER DETECTORS

2025

STRUCTOR-SERIES

METOR-SERIES

ULTIMATE PRECISION

FASTEST RESPONSE TIME

UNIVERSAL & ROBUST

HIGH IMMUNITY

COMMUNICATIVE

MADE IN GERMANY

ANDROTEC Premium Laser Detectors feature unrivalled performance and are characterized by tailored functionality, simple operation and excellent reliability.

User-Friendly. Two ergonomic LCD displays are clearly readable under all conditions. The strong sound is audible even in loudest environments.

Ultimate Precision. All units are individually calibrated during production and hence achieve highest accuracy. The digital readout can be set to all common measurement units.

Universal. Our Laser Detectors work with all popular construction lasers. Due to many unique features, they are more universal than conventional devices and hence open new areas of application.

Robust. A wide temperature range, mechanical stability and water tightness according to IP67 ensure permanent readiness for duty.

High Immunity. Suppression of strobe and stray light, emitted by LED and fluorescent lamps, guarantees an exceptional low level of false triggers without losing compatibility to common lasers.

Fastest Response Time. Our detectors for line lasers are the fastest you can get, and First Strike Detection also makes our detectors for rotating lasers fast as lightning.

Communicative. Our detectors with radio interface can stream readings online to a second detector, an Android device or a PC for remote display or monitoring applications. Together with our Vision LZR Lasers they can be used for aligning slopes in one or two axis. In addition, MTR-155RF allows full remote control of all laser functions.

Proven. AndroTec develops Laser Detectors for more then 20 years and holds many patents and patent applications in this area.

Made in Germany. Thanks to many years of experience in production, all Laser Detectors can be serviced, calibrated and repaired with highest technical qualification.

Available accessories for our Laser Detectors include:

- Various mounting clamps made of plastic or metal with and without vial
- Android app for remote display applications via BLE (MTR-95RF, MTR-125RGF or MTR-155RF only)
- RF receivers for machine control or real-time data transmission to PCs (MTR-95RF, MTR-125RGF or MTR-155RF only)
- Monitoring software
- XCal calibration software for laser transmitters
